Profile

Automation Engineer with four years of experience developing solutions to enable more autonomous warehouse and production line operations. Focused on deploying resilient systems that can recover from failure, and provide non-opaque traceability to empower support staff. Strong background and familiarity in software development. Confident in learning and untangling complex interconnected systems. Eager to solve challenging problems.

Experience

Automation Engineer 2, Niagara Bottling – Diamond Bar, CA June 2022 – Present

- Included on multiple pending patent applications for novel automation solutions.
- Designed, developed, and deployed software solutions to automate plant operations and enable automatic product quality checks (Node-Red, Docker, Python, Go).
- Scaled out data acquisition projects and pipeline pulling hundreds of "real time" (≤ 1 second latency) data points across thousands of machines across the plant network to increase operational visibility and traceability.
- Lead efforts to train off-shore IT support teams to provide 24/7 support for our company's Ignition based software projects.
- Provided emergency troubleshooting support and "hot fixes" relating to issues with legacy software systems (MES Software, PLC programs, etc.).
- Compiled documentation for existing software solutions supported by the team.

Student Software Developer, OSU Sustainability Office – Corvallis, OR March 2021 – March 2023

- Maintained the University's serverless Single-Page-Application (SPA) energy dashboard.
- Developed from the ground-up an infographic web-map (the "sustainability map") to highlight especially sustainable infrastructure features of the University (EV Chargers, Bioswales, Permeable Pavement).
- Created automated web-scrappers to collect and store energy data from otherwise opaque web data portals.

Education

Oregon State University, B.S. in Applied Computer Science September 2019 – June 2023

- Graduated *summa cum laude*.

Technologies

- **Languages:** Python, JavaScript, SQL (T-SQL), C++.
- **Databases:** SQLite, Microsoft SQL Server, PostgreSQL.
- **Tools:** TIA Portal, Simantic Manager, GDB, Docker, Git, make.
- **Systems & OSS:** Ignition, Litmus Edge, Azure DevOps, Grafana, Node-Red.

Volunteering

DAMCTF - CTF Challenge Author, Corvallis, OR. Spring 2024, Spring 2025

- Wrote CTF challenges (software puzzles) for rev/pwn/web categories for Oregon State Cyber-Security Club's CTF competition.

BSidesPDX - CTF Challenge Author, Portland, OR. Fall 2024, Fall 2025

- Wrote CTF challenges (software puzzles) for rev and pwn categories for the Cyber Security conference BSidesPDX's CTF competition.
